

WEB WIZARD

FOR DATATEL

It's no secret that the Internet is changing the way we do business. The rise of faster, cheaper communication allows students, faculty, staff and alumni to interact with your institutions like never before. And they all want access via the understandable browser interface offered by the World Wide Web. The Internet increases demand for real-time access to data, 24 hours a day, 7 days a week.

WebWizard for Datatel allows you to exploit your powerful education software, whether from Datatel, 3rd party vendors, or your own staff. You can almost "webify" your database directly, without asking your browser to load any unusual software. Already well established in IBM's U2 world of e-Commerce, **WebWizard** makes it easy to use your preferred HTML design software (e.g., Front-Page, Dream Weaver) and seamlessly blend in your live data.

That's right, *live data*. No exported data that suffers from synchronization issues. No extracted files that are outdated the moment you copied them to the web server. **WebWizard** allows you interact with your users directly.

But not just a couple of browsers. *Any browser*. **WebWizard** supports browsers that run on cell-phones, Palm Pilots, PDA's, AOL, and even Web-TV. If your students or faculty have a way to get to a web page, then you can be assured that with WebWizard, the data is not only accurate, but also matches the look and feel of your entire web site.

For technical folks who use Datatel, the best thing about **WebWizard** is that it requires very little training to use. **WebWizard** uses the programming skills and languages that they've used for years. Even programmers who have never touched HTML can design **WebWizard** web pages. And if your staff needs to support XML, Java, JavaScript, VBScript or any other types of technical standards, **WebWizard** supports those languages, as well. Some folks even use **WebWizard** as an alternative to complicated ODBC software. And, for the accountants among us, **WebWizard** can output to Excel.

- Admissions
- Financial Aid
- Fundraising
- Degree Audits & "What-if"
- Faculty Schedules
- Class Rosters
- Facility Management
- Budgeting
- Alumni management
- Registration (non-Datatel)

WebWizard has been used to webify all sorts of education software. You'll be astonished by the range and flexibility of its uses. To make your job even easier, we offer as part of the **WebWizard** for Datatel package many sample programs from other Datatel institutions, just so you can hit the ground running.

We even throw in 2 days of consulting as part of our software package. Use one day for training. Take the other day and we'll help you write those programs that you wanted done yesterday.

Don't forget, **WebWizard** is secure. We couldn't run all of our credit card enabled e-Commerce sites without supporting SSL and encrypted connections. We can even help with online college bookstores.

WebWizard for Datatel. The easiest tool for the power web user.

WebWizard supports

- Datatel software
- Off-the-shelf HTML Designers
- HTML graphics, animations, frames, and image maps
- Java
- JavaScript
- VBScript
- DHTML
- SSL
- Custom UniData software
- 3rd party software written for the IBM U2 platform

The easiest tool
for the
power web user

WebWizard can

- Report from Paragraphs
- Execute UniData subroutines
- Let you update your files just by clicking the submit button
- Use native operating system commands (such as UNIX and NT)
- Run on as many or as few UniData licenses as you want
- Make it easy to design data entry forms
- Output to Microsoft Excel
- Give your web pages a standard look and feel. Or not. Why limit yourself?

WebWizard is secure

- SSL support
- Encrypted communications
- Login routines can be customized to meet your specific WebAdvisor or portal system
- Restricts executables to only those commands that your site has "published" to the Web

WebWizard simply does *not require*

- any applets or components to run on the browser
- any specific browser or a certain release level of any browsers
- prior knowledge of HTML
- Envision or any other 4-GL tools to write software

WebWizard does require

- UniData release 3.0 or above
- A web server that runs on Windows, UNIX or Linux
- Knowledge of the UniData database management system
- An ability to securely communicate between the web server and the database server

WebWizard will be even more powerful if

- You understand how Datatel software works
- You have a clear vision of the web applications you need
- You do have HTML designers available, such as those who designed your web site
